

Recovering From a Double Computer Failure

Lorrin R. Garson

NCTCUG

November 2, 2011

It was not a dark and stormy night...

The power went out with a **BANG!**

But you said it wasn't dark?

Okay, the power went out with a **BANG!**

A “fuse” exploded

What Happened to the Computers?

- ❖ Our desktop computers were plugged into two different UPSs
- ❖ Both computers ran normally on battery power after the power failed
- ❖ The computers were shut down manually
- ❖ Both computers ***failed*** to boot-up
- ❖ The computers still under warranty
- ❖ The computers were (unofficially) dead

My wife, Ann, was not amused!

Other Devices

- ❖ Other devices plugged into the UPSs were unharmed:
 - ✓ Verizon Router
 - ✓ U.S. Robotics gigabit switch
 - ✓ HP MediaSmart home server (*maybe unharmed*)
 - ✓ Monitors
 - ✓ Laptop

Hewlett Packard Investigates

Sept 2

- ❖ Contact made with technician in India
 - ✓ Reseat memory (reboot)
 - ✓ Unplug disk drives (reboot)
 - ✓ Unplug power to motherboard (reboot)
- ❖ Second technician in India...
 - ✓ Reseat memory (reboot)
 - ✓ Unplug disk drives (reboot)
 - ✓ Unplug power to motherboard (reboot)

Computers Declared Officially Dead

Hewlett Packard Investigates

Sunday, Sept 4 (cont.)

- ❖ Case escalated to “Case Manager” in Colorado
- ❖ Was advised computer not repairable; new replacement computers would be sent

Hewlett Packard Investigates

Sept 6-13 (cont.)

- ❖ Difficulty in e-mail communications
- ❖ Confusion over **two** dead computers
- ❖ “Fraud” suspected causing delay

Hewlett Packard Ships Computers

Sept 13-19

- ❖ First replacement computer arrives
September 13th
- ❖ Second replacement computer arrives
September 19th

Comparing Dead to Replacement Computers

Computer	Operating System	CPU	Graphics Card	Memory (GB)	Disk Capacity
HP Pavilion Ultimate d4996t [DEAD]	Win-7 (64 bit) Professional	Intel Core2 Quad Q6600 (2.40 GHz)	NVIDIA GeForce 8500 GT	4	500 GB RAID-1
HP Pavilion HPE h8xt [Replacement]	Win-7 (64 bit) Ultimate	Intel Core i7-2600 (3.40 GHz)	NVIDIA GeForce GT 530	8	1 TB RAID-1

Comparing graphic cards is complex, see 

Value of each replacement computer: \$1,700

Microsoft Office 2007 Professional upgraded to Office 2010 Professional

Data Recovery

Sept 5-6

- ❖ Data recovered from Home Server to laptop*
 - ✓ Ann's data
 - ✓ Lorrin's data
- ❖ Data copied from laptop to external USB-2 disk drive
- ❖ Data now reside in four places

***Excluding photos which only reside on the Home Server and two external disk drives. The Home Server is also backed up to a third external disk drive.**

Recovery—Lorrin's Computer

Sept 16-17

- ❖ Replacement computer “initialized”
- ❖ Microsoft Security Essentials installed
- ❖ Hooked up to the LAN
- ❖ Data restored from USB-2 drive
- ❖ Software loaded
- ❖ Numerous “bits and pieces” ...

Software Installation

Office 2010	Outlook	Firefox	MS Security Essentials
Google Chrome	iTunes	Adobe Flash Player	Adobe Photoshop Elements 9
Malwarebytes	Ad-Aware	Belarc Advisor	CCleaner
APC PowerChute	RoboForm	TrueCrypt	Ditto Clipboard
Foxit PDF Viewer	Eraser	Google Earth	Gadgets

Belarc Advisor is very useful in software recovery; to download see 

Recovery—Ann's Computer

Sept 21-22

- ❖ Replacement computer “initialized”
- ❖ Microsoft Security Essentials installed
- ❖ Hooked up to the LAN
- ❖ Data restored from USB-2 drive
- ❖ Software loaded
- ❖ Numerous “bits and pieces” ...

Issues with Outlook

- ❖ Outlook.pst restored and placed in
C:\Users\Lorrin\AppData\Local\Microsoft\Outlook
- ❖ Other .pst files need attention (archive.pst, etc.)
- ❖ Access to e-mail servers must be established manually, **not automatically**
 - ✓ POP, SMTP and/or IMAP names
 - ✓ Incoming & outgoing port numbers
 - ✓ Other parameters

American Power Conversion

- ❖ September 26th ask APC about continued use of UPSs
- ❖ September 29th receive replacement UPSs from APC (and claim form)

Other Issues

- ❖ The 4-year old Home Server is being replaced
 - ✓ HP ProLiant MicroServer
 - ✓ Microsoft Windows Home Server 2011
- ❖ Additional backup is now being done using Windows-7 software to an external USB-2 disk drive

Summary

- ❖ ~4 days to be “back in business” using the family laptop
- ❖ Hewlett Packard was very helpful and generous
- ❖ American Power Conversion (APC) was also very generous
- ❖ Data and *most* software recovery took about 2 days/machine
- ❖ Constructing the new server is a work in progress

Summary (cont.)

- ❖ ~12-17 days to get replacement computers
- ❖ ~2-3 weeks to be “back in business”
- ❖ The experience was nerve-wracking but educational
- ❖ An iPod Touch with Calendar and Contacts saved our bacon
- ❖ Recovery without the family laptop would have been much more difficult
- ❖ *Without good backup, recovery would have been **impossible***

Thanks for your attention!
